1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 9 and 10 are rejected under 35 U.S.C. 102(b.) as being clearly anticipated by Stokes et al.

Stokes et al disclosed a VCO (Column 2, lines 26-30) comprising: a thin film bulk acoustic resonator (Column 2, lines 23-26) for generating a resonance frequency and controlling the generated resonance frequency according to applied voltage (Column 2, lines 5-8); and an amplifier for amplifying the resonance frequency (Column 1, lines 29-58, where Stokes et al show their intent to replace an impractical regular voltage controlled crystal in a VCO with their practical voltage controlled SBAR, which necessarily meant that the voltage controlled SBAR would be the feedback circuit for the VCO amplifier) controlled by the thin film bulk acoustic resonator to be a certain frequency (Column 2, lines 5-8) and outputting the amplified frequency (This is necessarily the signal at the VCO amplifier output); wherein the thin film bulk acoustic resonator increases or decreases the resonator frequency according to the voltage (Column 2, lines 5-8 where the bias is adjusted so

that the electric field across the SBAR is "varied ... over moderate levels ... which ... varies the resonant frequency ...).

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
4. Claims 1-8 are allowed.
5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to David Mis whose telephone number is (571)272-1765. The examiner can normally be reached on Monday through Thursday.
